

## StripitXT™

Extract Instantly Your QXP Document's Content

StripitXT is the only QuarkXPress® XTensions™ which automatically extracts Arabic and Latin text from QuarkXPress documents into a hot folder. StripitXT prepares the contents of your QuarkXPress documents for web designing and for archiving. No more extracting box by box!

Fast and efficient, this total solution saves text as Macintosh ASCII, Windows ASCII or Unicode in an XML format, and pictures as JPEG or PICT into folders, which are easily accessed by Web designers, or by searchable databases.

### Who benefits from StripitXT?

StripitXT is developed mainly for large publishing sites that require professional archiving utilities. StripitXT automates publishers' daily archiving procedures by allowing users to export QuarkXPress pages into text and pictures.

### StripitXT Advantages

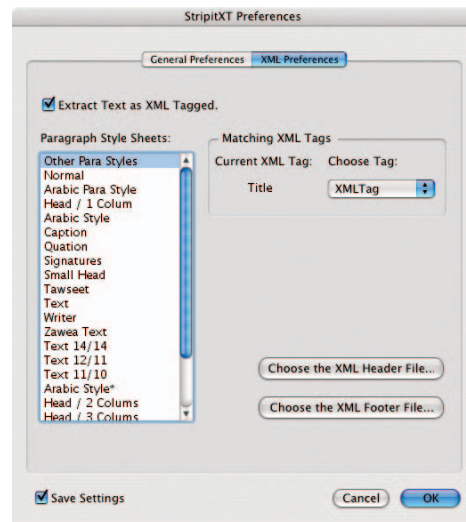

Unlike other XTensions, StripitXT links headers with text during extracting to maintain the proper sequencing of information. You will be able to relate the Style Sheets names into XML tags in StripitXT which will create an easy link facilitating the archiving process.

StripitXT adds a new submenu to the QuarkXPress utilities menu, which allows you to choose default or unique preference settings, to request a Stripit folder, and to extract:

- A PICT or JPEG preview of an entire page
- A PICT or JPEG preview of every picture box on the page
- A text file containing the full path and name of every picture on the page
- An XML file containing the text of all the page text boxes.

With a range of pre-archiving options, you determine which items and how much of your document to extract. You also have a variety of choices for the final archiving of your document: the scale of the PICT preview, exceptions, and article separators. Default and saving options have never made extracting easier and more effective.

StripitXT offers newspapers the ability to place extracted information on the World Wide Web. StripitXT is one more example of Layout Ltd.'s commitment to bring desktop publishing to a higher standard.

The StripitXT XML preferences window (above) allowing you to assign XML tags to Style Sheets.

### Features & Benefits

- Choose default or unique preference settings
- Request a Stripit export folder
- Save content as Macintosh ASCII, Windows ASCII or Unicode in an XML format
- Export previews of the entire pages and previews of every picture in the document
- Choose from a range of pre-archiving options
- Determine which items and how much of your document to extract

### Macintosh System Requirements

- PowerPC G3 or later
- 128MB RAM
- 230MB Hard Disk Space
- QuarkXPress 6.1 or later
